

Consortium for Sustainable Energy Development has been constituted and represented by the leaders of “Rick engineering” AD and “Bulgarian Energy Company” AD.

The main scope of activity include:

- Evaluation of the energy structure of the country - current situation and opportunities, their relation to the adopted energy strategy and other research, legal base, economic trends, evaluation of the national energy on an open energy market on the Balkans and in the European Union;
- Feasibility plan and offer for political and economic solutions, which would serve as an optimum guarantee for the preservation and development of energy production capacities in the country;
- The preparation of technological layouts for the most appropriate transfer /acquisition/ of energy production capacities, including transfer and support ones as well as capacities to be realized under guaranteed stability of regional and national energy networks.
